

How you study on Thinkera

This guide explains the platform's method, not one course. Every course here — programming, English, management, anything — is built the same way and presented the same way, so what you learn on this page travels with you into every course you open.

The whole of Unit 1 is free, every lesson in it.

What is in this guide

1 The method

2 The shape of a course

3 A lesson's four steps

4 The AI assistant

5 Practice and marks

6 Your progress

7 Questions and sessions

8 Your account

9 On a phone

10 Start

1 • The method

Before the buttons, the principle — it is what explains why the screens look the way they do.

Every course on the platform starts from **the official syllabus** you are studying: its lessons, its order, its terms. That is the base, and we do not change it. Onto it we add:

The base

The syllabus lessons

Each lesson in the syllabus becomes a full lesson on the platform: a video explanation, files, practice and questions. The order is the syllabus's order and the terms are its terms.

The addition

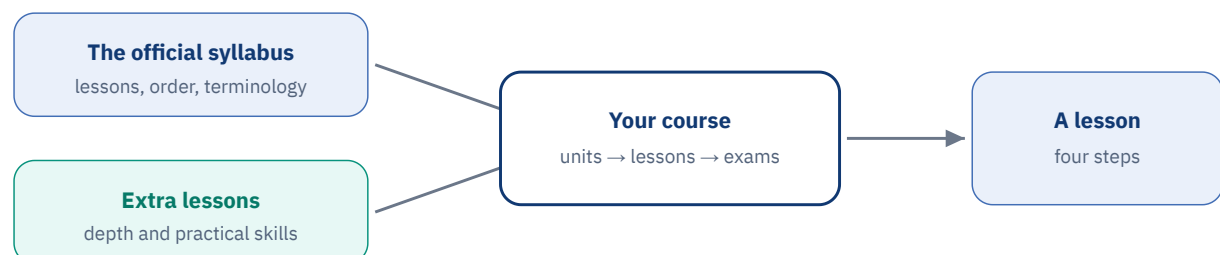

Extra lessons where they are needed

Where the syllabus passes quickly over something you need to understand properly, or assumes a practical skill it never teaches, an extra lesson is added. It is marked in the course, so you always know it is an addition and not part of the syllabus.

The difference

Thinking, not memorising

The questions here do not ask you to recall. They ask you to explain, compare and decide. And a model answer states the claim, the reason, the evidence and its limit — not one line to be learnt by heart.

The syllabus is the base and extra lessons are added onto it where they are needed; together they are one course, with its units and lessons.

2 • The shape of a course

The same shape in every course: units holding lessons, and an exam at the end of each unit.

1 The unit

A set of lessons on one subject. Unit 1 of any course is open in full and costs nothing — all of its lessons, not the first one.

2 The lesson

The thing you actually study in. Inside each one are the four steps in the next section.

3 Lessons open in order

The next lesson opens when you finish the one before it. That is not red tape: a course builds on itself, and lesson four assumes you know lesson three.

And “finish” means one thing: scoring 75% or more on the lesson's “Practice: Advanced level”. You do not have to open every file or complete every activity — you have to show you can do the hardest practice in the lesson. You get more than one attempt and the best one counts, so if you miss it first time, go back to the explanation and try again.

That is the default, and your trainer may change it for a particular lesson: sometimes a whole unit is asked for before a lesson opens, and sometimes you are given a choice of activities and finishing any one of them is enough. Whatever the condition, **the locked lesson itself tells you exactly what you are waiting on** — tap it and read the line.

4 The end-of-unit exam

Once the unit's lessons are done its exam opens, at more than one level, timed and marked.

Practice. It opens on the **quizzes** and their three levels — these are the ones that are marked. A link under them, **interactive practice**, leads to activities you work through without a mark, and a link there brings you back.

4 • The AI assistant

A button floating in the corner of the page, which opens a chat box that answers from your own course's lessons.

What makes it different from any other chatbot is that it searches inside your course first, and tells you where the answer came from. That happens in three steps:

1 • The lesson you are in

You get it, and where it came from

| not found

2 • The rest of the course

You get it, its lesson, and a way there

| not found

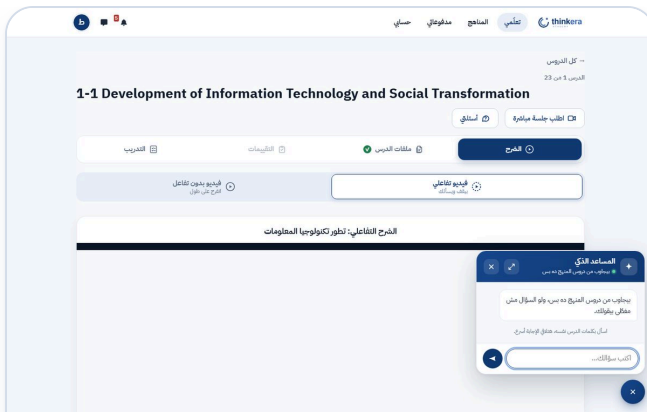

3 • It asks you

«Answer from outside the course?» Yes / No

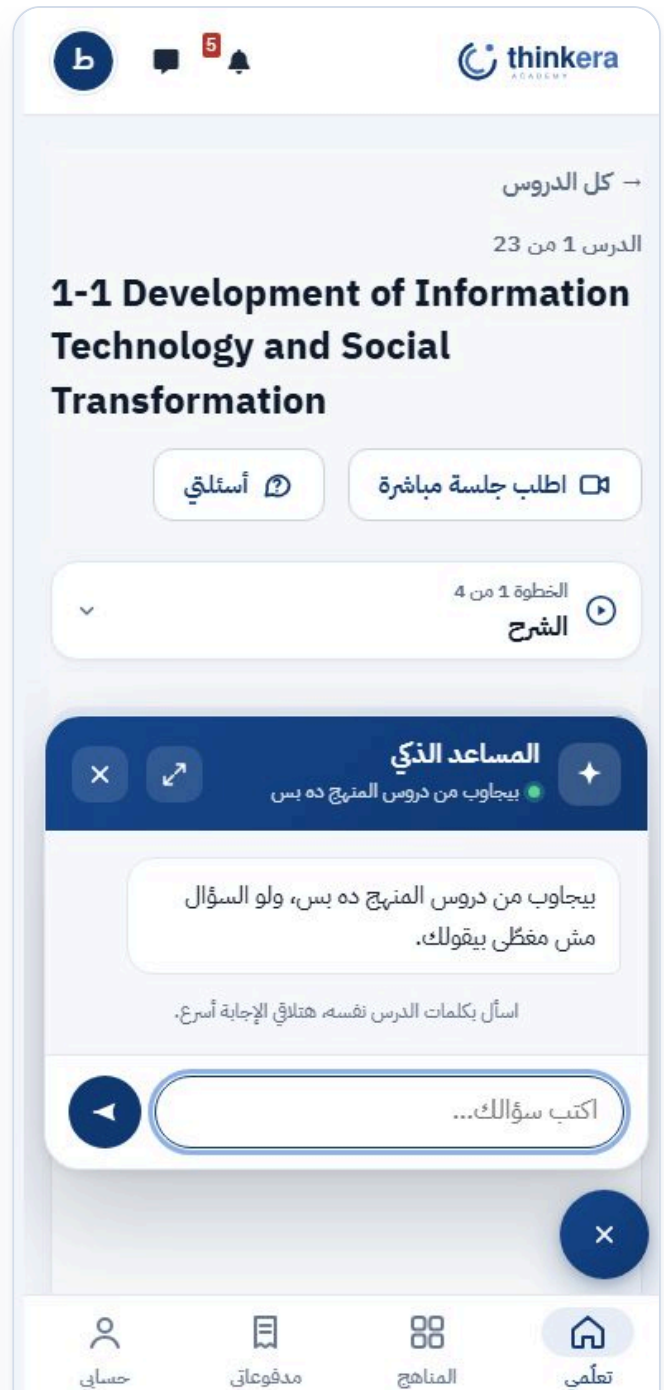

What that guarantees you

- The answer comes from your course
- It names the part of the lesson it came from
- If it is not there, it says so
- It leaves the course only if you say so
- An answer from outside is labelled

Three steps, each one reached only when the one before it found nothing.

The box opens over the page, so you never lose your place in the lesson. You can make it bigger when an answer is long.

On a phone it opens across the bottom of the screen.

What it actually does for you

Explains a part you did not follow

Ask with the lesson's own words: what does this mean, what is the difference between these two, give me an

Takes you to the right lesson

If the answer is in a different lesson, it names that lesson and offers to open it

example. The answer comes from the lesson's own explanation, with its source underneath.

for you — instead of leaving you to search the whole course.

Works while you study

The box opens over the page, so you can ask in the middle of a video or a file without leaving your place.

And things it does not do

- **It does not sit your quiz.** Give it an exam question word for word and it will explain the idea; the answer is still yours to write.
- **It does not invent.** What is not in the course is reported as not in the course, not made up.
- **It does not leave the course on its own.** That takes a press from you, and the answer comes back labelled as being from outside.

Your privacy: the model that answers you runs on the academy's own server, not on an outside service. What is recorded is that a request happened and how long it took — never your question and never your answer.

Worth remembering: the assistant helps you understand; it does not answer for you. The answer you write in a quiz has to be yours — that is what is being marked.

5 • Practice and marks

How your answer is marked, and when the mark reaches you — and this has changed: a written answer is now marked while you wait.

Multiple choice

You see the result straight away, with a note on every option: why the right one is right, and why each wrong one is wrong. The options are in the language of the question itself — an English question is answered True / False, an Arabic one «صح / خطأ».

Written answers: the Check button

A written question now works like every other one: you write your answer and press **Check**. The answer is handed in and the AI reads it in front of you, against the model answer and the mark scheme written for that question. A bar shows how far along it is, and the answer usually comes back in about fifteen seconds.

When it is sure: your mark, at once

If the model is **95% sure or more** of its own marking, the mark is worked out and shown to you there and then, with the feedback — and it waits for nobody to confirm it. So you carry on practising knowing where you stand, and take another attempt instead of losing a day waiting.

When it is not: your instructor

Below that, **no mark is given** — deliberately: a number the model is unsure of is worse than no number. You are told that your instructor will read this answer themselves and mark it, and that it will reach you when they have.

While you are working through a quiz: the buttons under the question read **previous question** and **next question**, and between them sits one that does both at once — **answer and go to the next question** — checking what you wrote and moving you on in a single press.

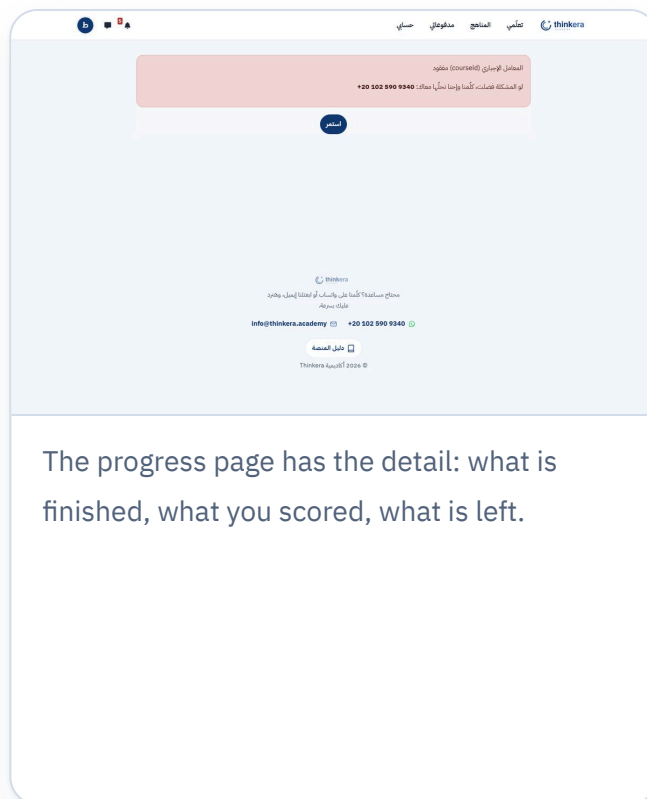

And **interactive practice** sits under the quizzes, behind a link inside the practice step: activities to work through at your own pace, with no mark attached.

6 • Your progress

Your home page opens on the only question that matters: where do I carry on?

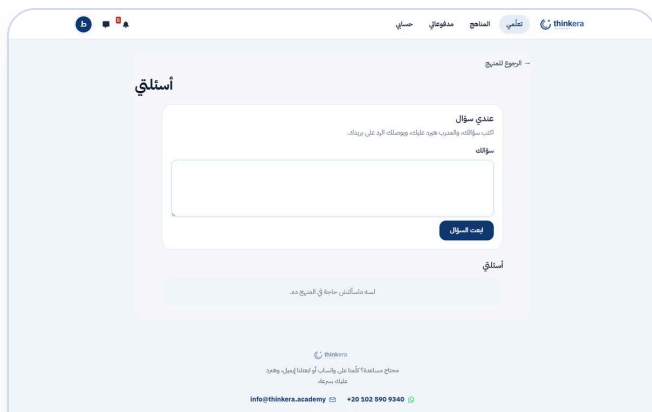

The first thing on the page is the lesson you stopped at, with your percentage through the course beside it. Above them the lesson count is split into its two kinds — the syllabus lessons and the extra ones — and under the percentage, how many of each you have finished.

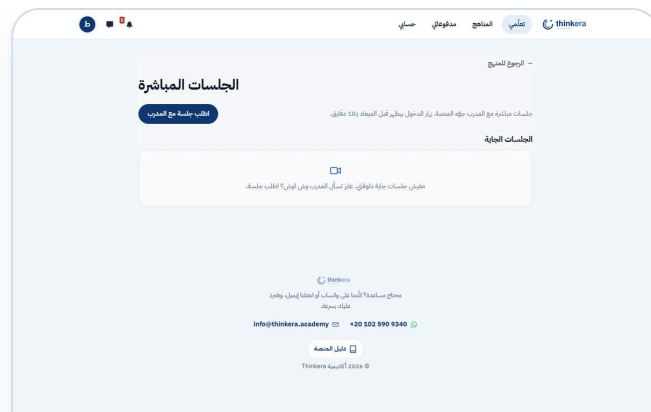

The progress page has the detail: what is finished, what you scored, what is left.

7 • Questions and sessions

For when you need a person rather than a model.

My questions. Write to your instructor, and the reply reaches you as a notification. The question stays with you, with its answer.

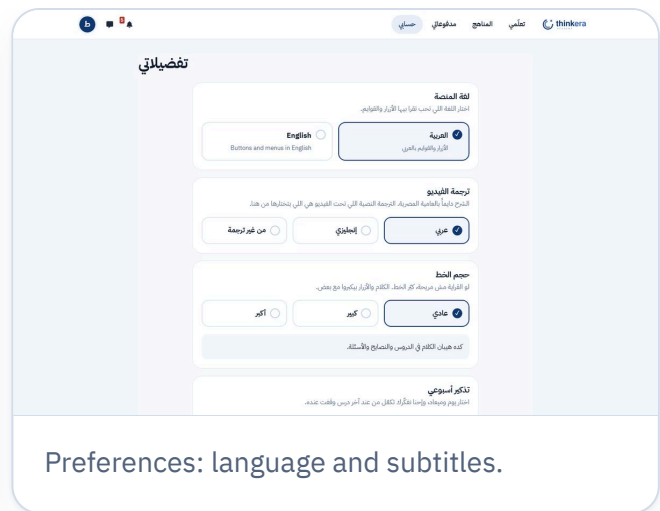

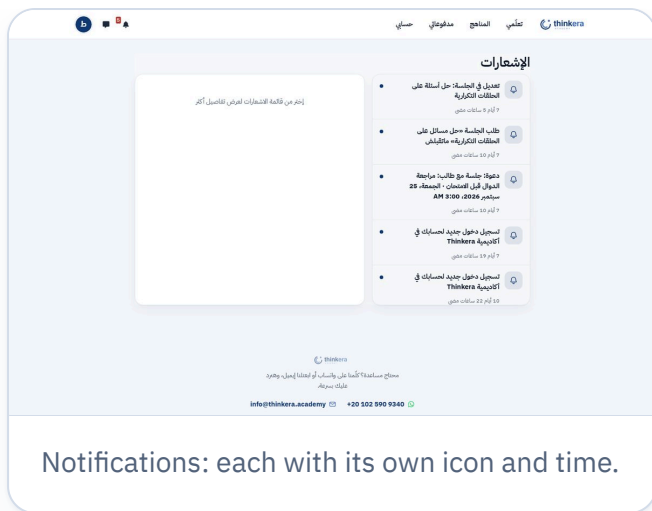

Live sessions. The course's sessions show with their times, and the room opens shortly before. You can also request a session of your own.

8 • Your account

Four pages, each doing one thing.

Page	What it does
Notifications	A reply to your question, a confirmed mark, a session about to start, a request accepted. Each one takes you to where it happened.
Preferences	The interface language, video subtitles, and display settings.
Account	Your name, your details and your guardian's number.
Payments	Every payment with its invoice, ready to download.

9 • On a phone

The same platform, fitted to a small screen.

There is nothing to install. Open the platform in your phone's browser: a bar at the bottom holds the pages you use, a lesson's steps become one list you pick from, and the assistant opens across the bottom of the screen.

10 • Start

Create a free account, open the course you care about, and study the whole of Unit 1 without paying. If the method suits you, you can unlock the rest of the course from inside the platform.
